Tech Data, dtd. 20 October 1964.

Subject,

1. The attached equipment list (inclosure #1) is offered for your review and consideration to update the LOAP. I regret that it has taken so long to fulfill your request and even now I'm not sure that what we are furnishing you will satisfy your requirement.

2. Many things have changed since the early days of the Idealist program and what we once may have considered a semi-standard support effort on our part no longer exists. In a high percentage of the cases, support of the type we furnish is provided by units of the Armed Forces often utilizing equipment other than those listed on inclosure #1.

3. Although a piece of equipment is shown on enclosure #1, this is not intended to indicate that such equipment will be required for a detachment deployment or be used in support of any project Idealist operation. For each type of project operation, both operational and intelligence requirements must be reviewed and equipment selected and programed to satisfy these requirements.

4. We do attempt to maintain a quick reaction capability to support Idealist efforts with both FAK units and personnel. However, the FAK units are tailored to limited functions, such as quality control, and as such are not considered to be part of the LOAP.
